DeISolar announces new solar modules with high power performance at Intersolar 2010

Release Date: 07 June 2010

Issued by: DeISolar Co., Ltd.

Munich/Hoofddorp, 07.06.2010 (profact) – At the 2010 Intersolar, the largest specialist trade fair for the solar industry worldwide, DeISolar will exhibit its high efficiency solar modules with a positive power tolerance of up to 3 percent. The solar modules also feature excellent power performance even in low light intensity conditions. In addition, DeISolar will announce its new series of black modules with black-anodized aluminum frames. The dark appearance of the black module model is very aesthetically attractive and may be blended elegantly into a variety of residential roofs.

DeISolar employs highly automated module production lines and inline inspection systems including electroluminescence (EL) to reduce the risk of cell microcracks, improve cell encapsulation, and assure consistent module quality and reliability. The resulting high production quality is supported by DeISolar's 5 year product warranty and performance guarantee of 90 percent for 10 years and 80 percent for 25 years respectively.

All DeISolar module series are certified to IEC 61215 ed. 2 and IEC 61730. The fabrication is also certified in accordance to ISO 9001/14001 and OHSAS 18001. Product series with IEC and additional UL certificates are available for the European and US markets.

About DeISolar Co. Ltd

DeISolar, a subsidiary of Delta Electronics, has become a leading solar cell and module provider with proven process innovation, state-of-the-art manufacturing technology, world-class cell efficiency, and record production yields since its inception in 2004.
